

TAKE BACK YOUR ENERGY LOSS

Solar panel contamination can reduce electricity yield by *over 30%*.

Thorough, professional cleaning is crucial - and you can provide it with the Kärcher iSolar cleaning system.

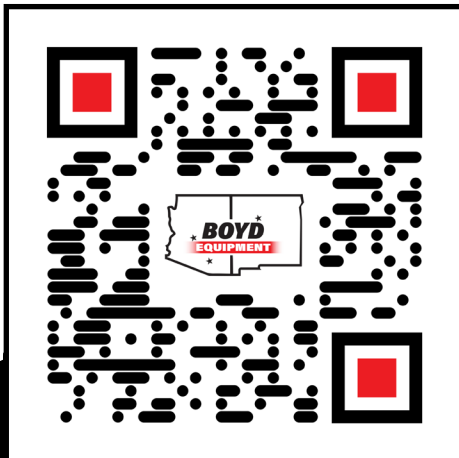

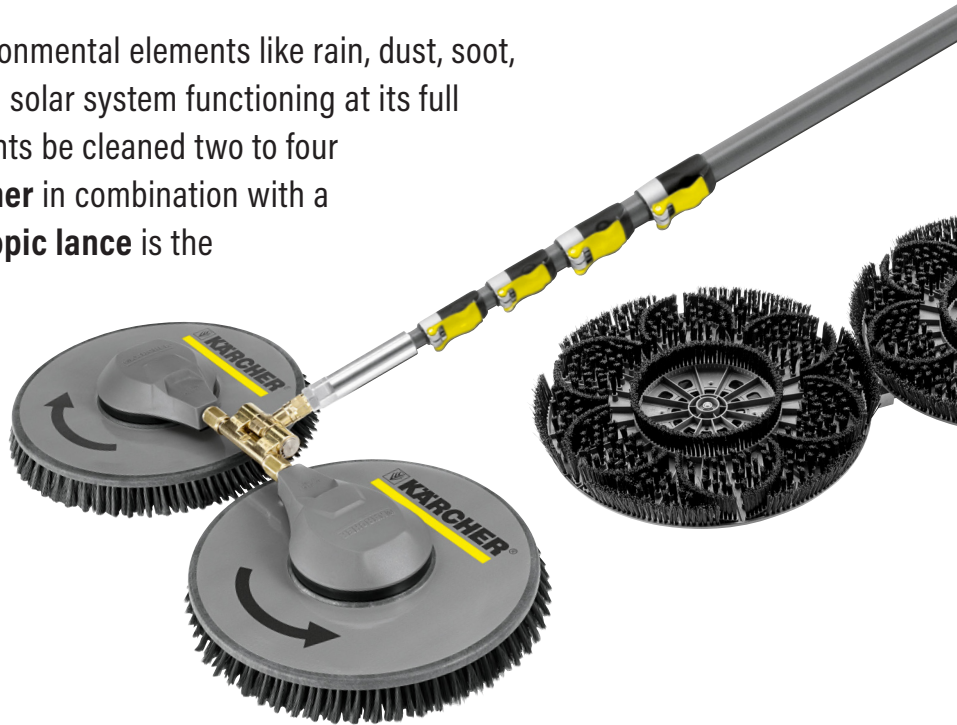

boydco.com

Solar panel cleaning is the fastest-growing cleaning specialty in the Southwest!

Solar panels lose effectiveness due to environmental elements like rain, dust, soot, pollen, leaves and bird droppings. To keep a solar system functioning at its full potential, it is recommended that components be cleaned two to four times a year. A professional **pressure washer** in combination with a **spinning brush attachment** and a **telescopic lance** is the best way to clean solar panels efficiently.
